

## **Backing up Images**

Are you prepared if your PC crashes, loses data, your best images? Recovery could be expensive to reinstate your prized images. Initiating your backups to protect your images is not the most exciting of things to do when you could be outside using your camera.

*Back Up facilities available are as follows*

- External Hard Drives
- Copying images to CD or DVD
- Doing regular internal back ups in Photoshop.

It is recommended that as soon as you download a card from your camera, do a back up first. Check the back up to ensure the images are there before deleting the images from your card. Better to be safe than sorry.
